

First you need to Delete all downloads of NIA Universe before you begin.

1. Click "GO" from the top task bar and select "Utilities."

2. In the "Utilities" folder, open the "Terminal" Application.

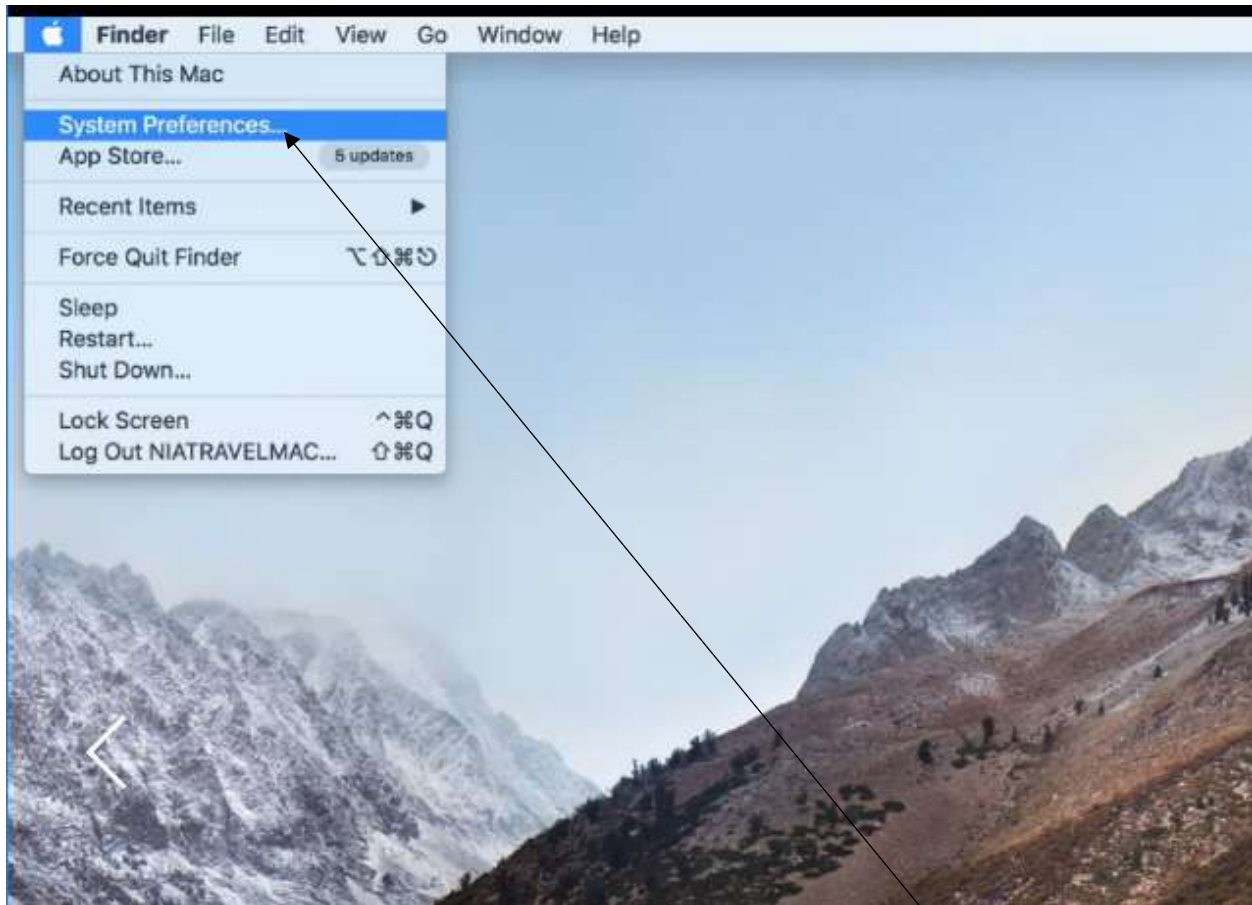

3. You will see a new window open with the terminal application running. Type in the following command into the terminal and hit enter:

```
sudo sptcl --master-disable
```

If you have a password, you will be asked to enter it. Once you enter the password, hit enter. You should see a single line of text

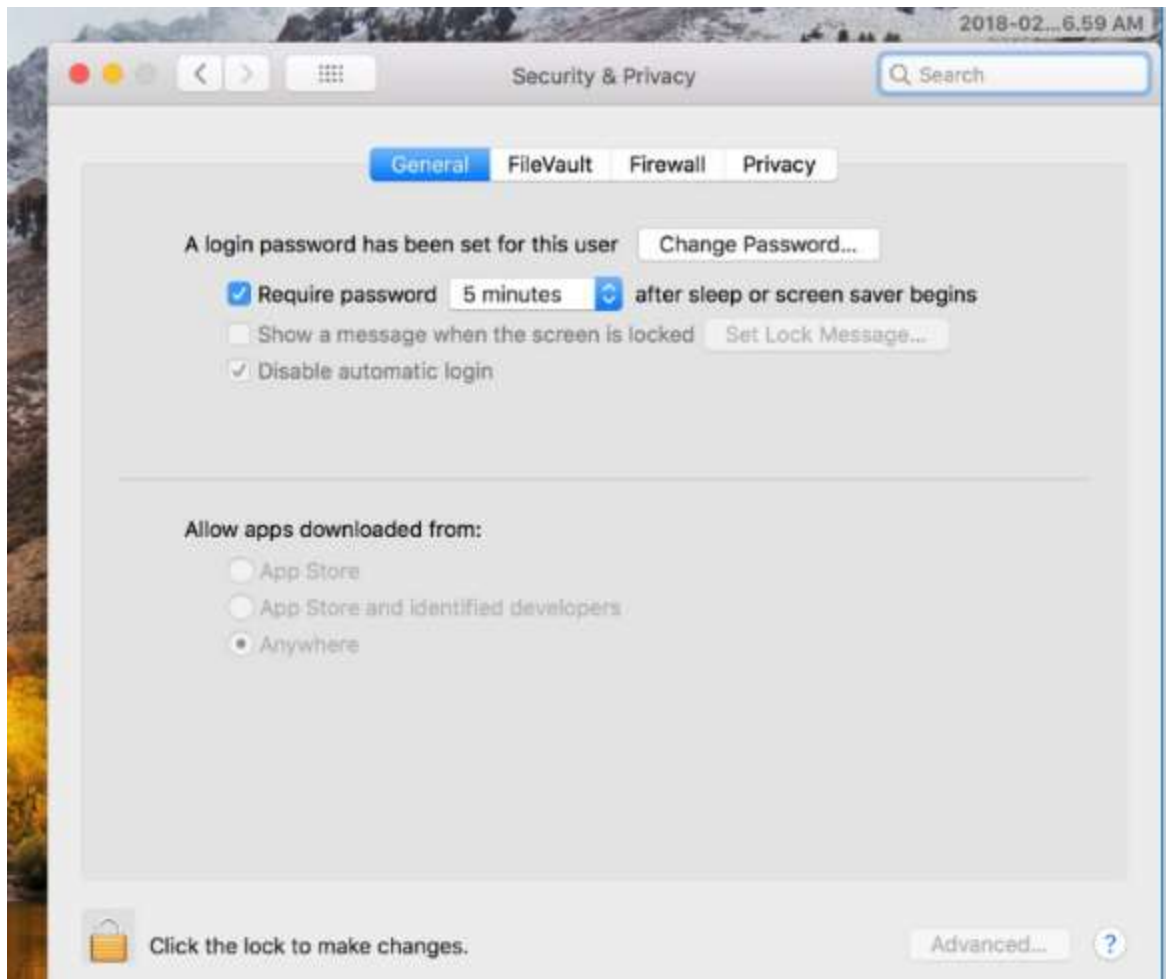

```
[ComputerName]:~ [Username]$
```

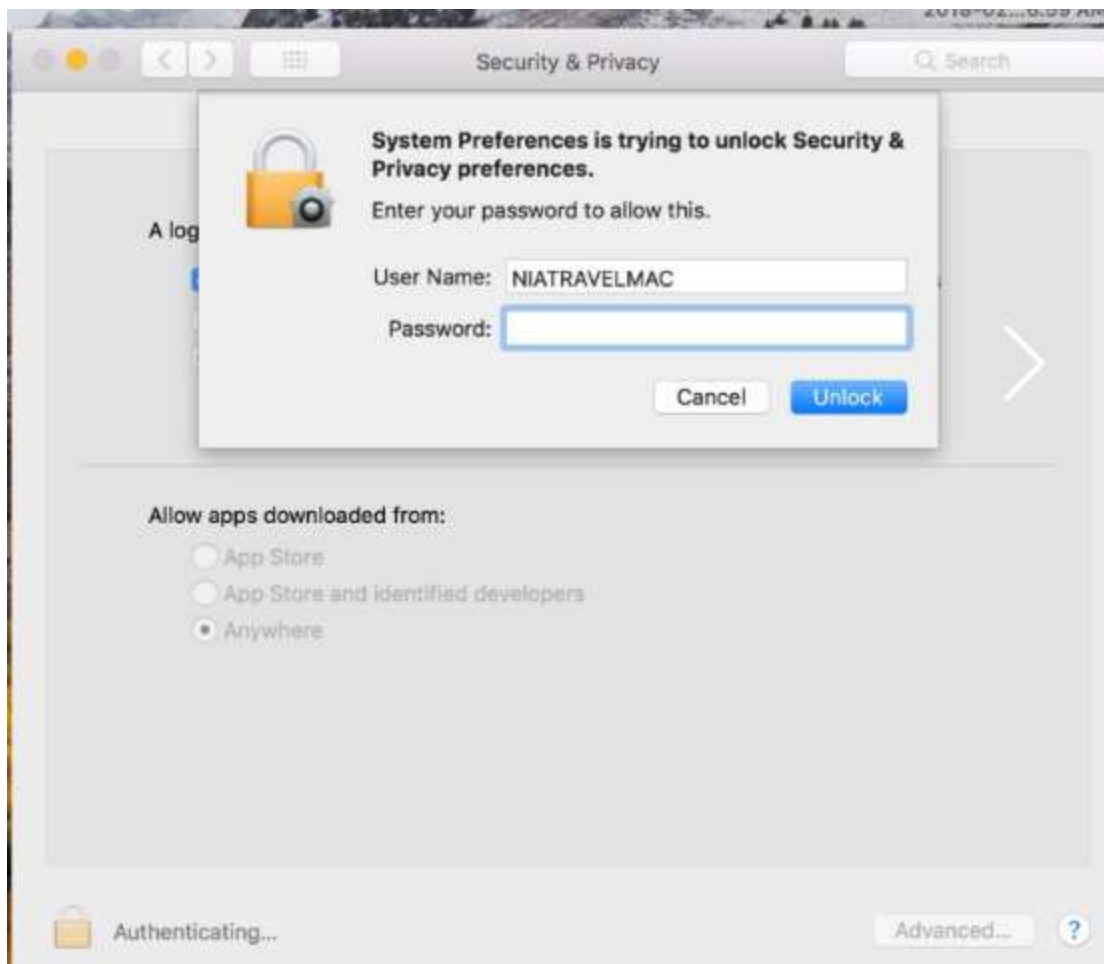

4. Next click the Apple icon in the top left corner and select System Preferences

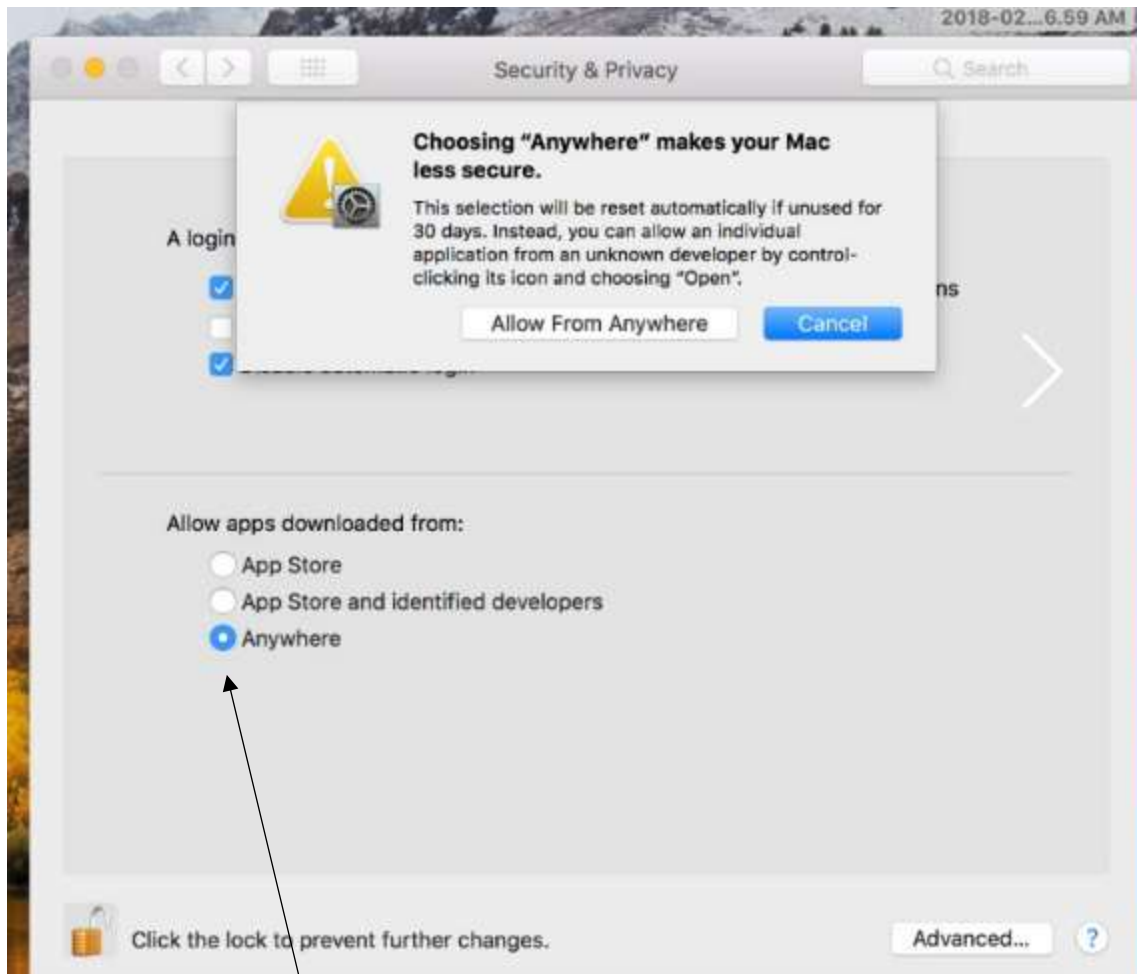

5. Under System Preferences, Click Security & Privacy

6. Verify that you are able to allow apps downloaded from anywhere, If you are unable to do so, click the lock in the lower left corner of the window.

7. When prompted type your password

8. Select the Anywhere Option and confirm the chance by selecting "Allow From Anywhere" in the pop-up window

Last step you need to redownload your NIA Universe software and install
